CORE METHODS

Data cleaning | EDA | Data storytelling | Dashboarding | Business interpretation

Data Professional Survey Dashboard

Power BI / Business Intelligence

PROJECT BRIEF

Built an interactive survey dashboard to examine compensation, career-entry difficulty, technical preferences, geography, and workplace satisfaction across data professionals.

TECH STACK

Power BI

Power Query

DAX

Data Modeling

OUTCOME

Turned survey responses into an interactive BI report that supports comparison, exploration, and practical career/workforce decisions.

SQL Data Cleaning & Transformation

MySQL / Data Quality

PROJECT BRIEF

Created a safe staging workflow to detect duplicates, standardize text, convert dates, repair missing industry values, and remove unusable records from a layoffs dataset.

TECH STACK

- MySQL
- CTEs
- Window Functions
- ROW_NUMBER()
- Self-JOINS

OUTCOME

Reduced a 2,361-row raw dataset to 1,995 analysis-ready records while preserving the original source data.

Exploratory Data Analysis of Layoffs

MySQL / Exploratory Analytics

PROJECT BRIEF

Explored layoffs across companies, time periods, countries, industries, funding stages, and company-location combinations to surface rankings, trends, and concentration patterns.

TECH STACK

- Time-Series Analysis
- DENSE_RANK()
- Window Functions

OUTCOME

Built a reusable SQL analysis layer covering cumulative trends, company-year rankings, country analysis, industry analysis, and funding-stage comparisons.

Alaska Aviation Facilities Analysis

Python / Exploratory Analysis

PROJECT BRIEF

Analyzed Alaska aviation facility data to classify facility types, isolate seaplane bases, rank the highest facilities by elevation, and summarize the dataset with visualizations.

TECH STACK

Python

Pandas

Matplotlib

Jupyter

OpenPyXL

OUTCOME

Profiled 751 aviation facilities and translated spreadsheet data into reproducible Python analysis and visual outputs.

Bike Sales Analysis

Excel / Customer Analytics

PROJECT BRIEF

Analyzed customer demographic, financial, geographic, and behavioral attributes to understand bicycle purchasing patterns and identify useful customer segments.

TECH STACK

- Dashboarding
- PivotTables
- PivotCharts
- Data Cleaning

OUTCOME

Found an overall purchase rate of 48.1% and highlighted commute distance, age, region, and occupation as useful dimensions for segmentation.

Coffee Sales Analysis

Excel / Sales Analytics

PROJECT BRIEF

Integrated transaction, customer, and product data to analyze sales performance, product demand, customer value, geography, and loyalty-card behavior in an interactive dashboard.

TECH STACK

PivotCharts

XLOOKUP

INDEX & MATCH

PivotTables

OUTCOME

Transformed 1,000 transactions into a business analytics solution linking sales performance to customer behavior and actionable recommendations.

Let the work speak

A recruiter-ready snapshot of the projects, tools, and analytical mindset behind the portfolio.

Muhammad

Business Data Analytics Student

Interested in data analysis, business intelligence, SQL-driven insight, and turning messy datasets into clear decisions.

VALUE PROPOSITION

Build. Analyze. Visualize. Explain.

A project-first portfolio demonstrating practical work across Python, MySQL, Power BI, and Excel.
